Production of mesons, Geoffrey F. Chew—1128(L)
Production of nucleons, S. A. Korff and A. Cobas—1010
Properties of cosmic rays at very high altitudes, Martin A. Pomerantz—651(A)
Sea level latitude effect, Peter A. Morris, W. F. G. Swann, and H. C. Taylor—1226(A)
Search for electrons in primary radiation, Robert I. Hulsizer and Bruno Rossi—1402(L)
Showers at high altitude, Roland Maze, André Fréon, and Pierre Auger—418(L)
Showers in Pb, W. B. Fretter—41
Silver chloride as detector, W. L. Whittemore and J. C. Street—543(A)
Slow mesons, decay of, G. E. Valley—1251(A)
Specific primary ionization in hydrogen, Frank L. Hereford—1239(A)
Surplus gamma-radiation from rocks, Victor Francis Hess and J. Donald Roll, S. J.—592, 1239(A)
Temperature coefficient of soft component, L. E. Smith, Jr.—540(A)
Variation with latitude, A. T. Biehl, R. A. Montgomery, H. V. Neher, W. H. Pickering, and Wm. C. Roesch—533(A)

Cross section, measurements, theory
Behavior near thresholds, Eugene P. Wigner—1002
Capture of electrons by ions, Julian K. Knipp—652(A)

Cross section, measurements, theory (continued)
C^{12} (*p*, *pn*) C^{11} at high energy, Edwin M. McMillan and Richard D. Miller—80(L)
C^{12} (*n*, 2*n*) C^{11} at 90 Mev, Edwin M. McMillan and Herbert F. York—262(L)
Differential *D* (*d*, *n*) He^3 cross section, B. R. Curtis, Louis Rosen, and J. L. Fowler—648(A)
For fast continuous energy neutrons, V. L. Parsegian, L. V. Titone, and C. W. van der Merwe—1265(A)
of Fe, Ni, and Bi for fast neutrons, H. H. Barschall, C. K. Bockelman, and L. W. Seagondollar—659; 1218(A)
In neutron proton scattering, M. Camac and H. A. Bethe—191
Neutrons at low energies, crystal interference and molecular binding effects, W. W. Havens, Jr., L. J. Rainwater, and C. S. Wu—1265(A)
Neutrons in Fe, Ni and Cu, L. J. Rainwater, W. W. Havens, Jr., and C. S. Wu—1265(A)
Slow neutron cross section for H, D, F, Mg, S, Si, and quartz, L. J. Rainwater, W. W. Havens, Jr., J. R. Dunning, and C. S. Wu—733
Slow neutron studies of Cu, Ni, Bi, Fe, Sn and calcite, W. W. Havens, Jr., L. J. Rainwater, C. S. Wu, and J. R. Dunning—963
S^{32} (*n*, *p*) P^{32} for neutron energies of 1.6 to 5.8 Mev, E. D. Klema and A. O. Hanson—106
Thermal neutron absorption by separated isotopes, H. Pomerance and J. I. Hoover—1265(A)
Of various elements for neutrons, Edward Melkonian—1265(A)

Crystal structure
Achromatization of Debye-Scherrer lines, H. Ekstein and S. Siegel—1207(L)
Breakdown directions in lithium halide crystals, J. W. Davisson—1196, 1261(A)
Diamond, used as counter, Kathleen Lonsdale—1467(L)
Energy levels of NaCl, E. Fisher—36
Grain boundaries in metals, T'ing-Sui Kê—267(L)
Least squares and x-ray crystal structure analysis, W. J. Taylor—1262(A)
Metallic carbide lattice energies, I. Hodes—539(A)
Monoclinic, piezoelectric constants, Hans Jaffe—1467(L)
Phase determination, implication theory, M. J. Buerger—927(L)
Proteins as polycondensations of amino acids, Dorothy Wrinch—1225(A)
Radii of heavy elements, W. H. Zachariasen—1104
Refraction for electrons in crystalline media, Lorenzo Sturkey—183(L)
Of NaH and NaD, neutron diffraction, C. G. Shull, E. O. Wollan, G. A. Morton, and W. L. Davidson—842
Of technetium, R. C. L. Mooney—653(A)
Of Sn, twinning, W. P. Mason, H. J. McSkimin and W. Shockley—1213(L)

Crystalline state
Age hardening, Herbert M. Meyer—1263(A)
Binding energy for an electron in NaCl, J. J. Markham and F. Seitz—1260(A)
Binding energy of electrons in KCl, Kenneth E. Keyes—1260(A)
Damping of anodized aluminum, A. Hammond, J. Michener, J. Koehler, and E. Salkovitz—1230(A)
Diamond crystal counters, Robert Hofstadter—631(L)
Dielectric behavior of $BaTiO_3$ near 0°K, J. M. Richardson—1261(A)
Dislocations, energy of, W. Shockley—1232(A)
Domain structure and electric response of $BaTiO_3$, B. T. Matthias and A. von Hippel—1261(A), 1378
Electrical properties of pure silicon and silicon alloys, G. L. Pearson and J. Bardeen—1256(A)
Electrostriction in $BaTiO_3$ ceramics, Hans Jaffe—1261(A)
Energy for migration of paired vacancies in KCl, G. J. Dienes and Frederick Seitz—1260(A)
Energy levels in solids, temperature dependence, Alvin Radkowsky—749
Ferromagnetic resonance absorption in Fe crystal, Arthur F. Kip and Robert D. Arnold—1247(A)
Ferromagnetic resonance absorption in various materials, W. A. Yager—1247(A)
Growth of $BaTiO_3$ crystals, B. T. Matthias—808(L)
Hysteresis loops for $BaTiO_3$, A. de Bretteville, Jr.—807(L)
Magnetic susceptibilities of single Zn crystals, S. G. Sydoriak—1247(A)
Nuclear paramagnetic resonance absorption, R. V. Pound—1247(A)
Orientation of domains in $BaTiO_3$, G. C. Danielson—1248(A)
Paramagnetic resonance absorption in $CuSO_4$, Robert D. Arnold and Arthur F. Kip—1247(A)
Photoelastic constants of cubic crystals, E. Burstein, P. L. Smith, and B. Henvis—1262(A)
Piezoelectric effect in barium titanate, Walter L. Cherry, Jr. and Robert Adler—1230(A)
Plastic deformation in brass and aluminum, Andrew W. McReynolds—1262(A)
Polarizability of O^{--} in presence of Ti^{+4}, W. Shockley—1273(A)
Properties of $BaTiO_3$, B. Matthias and A. von Hippel—268(L)
Proton paramagnetic resonance, fine structure, G. E. Pake—1248(A)
r-f absorption lines in solids, J. H. Van Vleck—1229(A)
Rates of grain growth, Paul A. Beck, M. L. Holzworth, and Hsun Hu—526(L)
Self-diffusion of Na in NaCl, Dillon Mapother and Robert Maurer—1260(A)
Sintering of metal powders, A. J. Shaler and J. Wulff—926(L)
Slip along grain boundaries, T'ing-Sui Kê—1235(A)
Stress-induced diffusion of C and O atoms in Ta, T'ing-Sui Kê—1231(A)
Structure and conductivity in the VI_b group, A. von Hippel—1257(A)
Superconductivity and Debye characteristic temperature, K. R. Dixit—182(L)
Theory of luminescence, Ferd E. Williams—1257(A)
Ultrasonic reflections by domains in rochelle salt crystals, William J. Price—1132(L)

Dielectric constants (see also **Dielectrics and dielectric properties**)
Dust electrostatics, James W. Hansen—532(A)
Of tellurium, V. A. Johnson—1231(A)
Dielectrics and dielectric properties
Of $BaTiO_3$ near 0°K, J. M. Richardson—1261(A)
Of $BaTiO_3$ single crystals, B. Matthias and A. von Hippel—1378
Low frequency dispersion in ionic crystals, R. G. Breckenridge—1261(A)
Of Te, V. A. Johnson—1231(A)
Diffraction of atoms and neutrons
Crystal orientation in Al, slow neutrons, G. Arnold and A. H. Weber—1385
Small-angle diffraction, Otto Halpern—653(A)
Diffraction of neutrons (see **Neutron diffraction**)
Diffraction of radiation
Small-angle diffraction, Otto Halpern—653(A)
Of sound, A. Storruste and H. Wergeland—1397(L)
Diffusion (see also **Thermal diffusion**)
Gaseous self-diffusion, W. G. Pollard and R. D. Present—762
Mobility of electrons in insulators, Frederick Seitz—549
Self-diffusion of Na in NaCl, Dillon Mapother and Robert Maurer—1260(A)
Discharge of electricity in gases
Arc motion reversal, heating cathode, Charles G. Smith—543(A)
Breakdown in air at microwave frequencies, D. Q. Posin—496, 1245(A)
Breakdown in helium at microwave frequencies, Melvin Herlin and Sanborn C. Brown—1245(A)
Characteristics of bridges and arcs between metallic contacts, G. F. Hull, Jr. and H. Saltzman—1262(A)
Cold-cathode discharges, initiation of, Jerome Rothstein—1245(A)
Ejection of electrons by ions, R. R. Newton—1122(L)
Fields in cathode dark space, S. V. Galginaitis—1245(A)
Glow discharge in Hg vapor, B. Pearson DeLany and Paul L. Copeland—1232(A)
In high frequency electrical fields, Donald H. Hale—1046
High frequency gas discharges, breakdown, L. M. Hartman—316
High frequency gas discharges, components of distribution function, H. Margenau and L. M. Hartman—309
High frequency gas discharges, electron distribution functions, H. Margenau—297
High frequency gas discharges, similarity principle, H. Margenau—326
Mercury vapor jets in spark discharge, J. Richard Haynes—891
Minimum sparking potentials, cathode behavior, Harold Jacobs and Armand P. LaRocque—1244(A)
Point to plane corona, L. B. Loeb and W. N. English—532(A)
Radiofrequency conductivity of plasmas, Ladislas Goldstein and Nathaniel L. Cohen—83(L)
Spark breakdown, Paschen's law, Charles G. Miller and Leonard B. Loeb—84(L)
Threshold for burst pulse corona, Leonard B. Loeb—798
Transients in Townsend discharges, Robert R. Newton—570
Water drop corona, W. N. English—532(A)
Discharge of electricity in high vacua (see also **Thermionic emission; High voltage tubes and machines**)
Charge between close electrodes, L. H. Germer and F. E. Haworth—1121(L)
Sparking in high vacuum diodes, W. E. Ramsey and W. E. Danforth—1246(A)
Time of electrons between electrodes, Delbert N. Eggenberger and Paul L. Copeland—1228(A)
Disintegration and excitation of nucleus (see also **Radioactivity**)
α-particles on Ag, excitation curves, S. N. Ghoshal—417(L)
Angular distribution from Li^7 $(p, \alpha)\alpha$, N. P. Heydenburg, C. M. Hudson, D. R. Inglis and W. D. Whitehead, Jr.—241
Angular distributions in reactions, L. Wolfenstein and R. G. Sachs—528(L)
Of Sb^{124} coincidence experiments, E. T. Jurney and Allan C. G. Mitchell—1153
Of As, with 190 Mev deuterons, H. H. Hopkins, Jr. and B. B. Cunningham—1406
Of Be^8, Arthur Hemmendinger—806(L)
Beta-decay of Kr^{88}, recoil of nucleus, J. C. Jacobsen and O. Kofoed-Hansen—675
Continuous γ-radiation during β-decay, C. S. Wang and D. L. Falkoff—1220(A)
Of Cu^{63}, Ag^{107} and Ag^{109} by electrons, L. S. Skaggs, J. S. Laughlin, A. O. Hanson, and J. J. Orlin—420(L)
Correlation between beta- and gamma-emissions, D. L. Falkoff and G. E. Uhlenbeck—649(A)
Cross section for C^{12} (p, pn) C^{11} at high energy, Edwin M. McMillan and Richard D. Miller—80(L)
Decay of fission products, K. Way and E. P. Wigner—1318
$D+D$ reactions, theoretical considerations, E. J. Konopinski and E. Teller—822
(d, p) reactions, low states of O^{17}, N. P. Heydenburg and D. R. Inglis—230
Disintegration energy of N^{14} (n, p) C^{14}, P. Huber and A. Stebler—85(L)
Electro-disintegration of Cu^{63}, Ag^{107}, and Ag^{109}, J. S. Laughlin, L. S. Skaggs, A. O. Hanson, and J. J. Orlin—1223(A)
Evidence for di-neutron, D. N. Kundu and M. L. Pool—22
Excitation function, $(Li^7$ $(p, n))$, J. E. Hill and W. E. Shoupp—931
Excitation function of reaction C^{12} $(n, 2n)$ C^{11}, W. Heckrotte and Peter Wolff—265(L)
Excitation function of the reaction C^{12} (p, pn) C^{11}, W. Heckrotte and Peter Wolff—264(L)
Excitation of Na^{24} and Na^{22} by deuteron and alpha bombardment of Al, A. C. Helmholz and J. M. Peterson—541(A)
Of F and Li by protons, T. W. Bonner and J. E. Evans—666
$\gamma - p$ process in Be^9, L. Conklin and William Ogle—648(A)

Disintegration and excitation of nucleus (continued)
Gamma-radiation from bombardment of F, B and Be by protons, James A. Jacobs, Philip R. Malmberg and John S. Wahl—1130(L)
Gamma-radiation from light nuclei under proton bombardment, W. A. Fowler, C. C. Lauritsen, and T. Lauritsen—181(L)
Gamma-rays and neutrons from Be bombarded by deuterons, C. W. Malich and J. R. Risser—648(A)
Gamma-rays from alpha-particle reactions, David E. Alburger—1241(A)
Gamma-rays from disintegration of Be by deuterons, C. P. Swann, W. J. Scott, E. L. Hudspeth, and C. E. Mandeville—648(A)
He^3 (n, p) H^3 reaction, neutrino mass, D. J. Hughes and C. Eggler—809(L), 1242(A)
Introduction of two neutrons into nuclei, D. N. Kundu and M. L. Pool—1220(A)
Neutron and gamma-ray yields from deuterons on carbon, Carl L. Bailey, George Freier and John H. Williams—274
Of N by neutrons, P. Huber and A. Stebler—89(L)
Nuclear evaporation recorded near sea level, Herman Yagoda—263(L)
Photo-effects in middle-weight nuclei, L. I. Schiff—534(A), 1311
Proton-gamma-ray coincidence counting, Bruce B. Benson—7
Resonance at 1430 kev in $C^{12}+H^2$, J. C. Harris, T. W. Bonner, J. E. Evans, and G. C. Phillips—649(A)
Resonance of Li^7+H^1, J. E. Evans and T. W. Bonner—649(A)
Stars in photographic emulsions, experimental, Eugene Gardner and Vincent Peterson—533(A)
Stars in photographic emulsions, theoretical, Wendell Horning—533(A)
S^{32} (d, p) S^{33}, proton groups, Perry W. Davison—1241(A)
Threshold for proton-neutron reaction in Cu, W. E. Shoupp, B. Jennings, and W. Jones—421, 1223(A)
Tripartition of heavy elements, erratum, Tsien San-Tsiang—529(L)
X-ray yield curves for $\gamma-n$ reactions, G. C. Baldwin and G. S. Klaiber—1156, 1266(A)
Yield of D (D, p) H^3, distribution of protons, E. Bretscher, A. P. French, and F. G. P. Seidl—815
Yields of x-ray induced reactions, G. Friedlander and M. L. Perlman—1266(A)

Dynamics
Actual mass and inert mass, Gertrude Schwarzmann—1274(A)
Damped non-linear oscillator, M. Avramy Melvin—1274(A)
Multiple excitation of an elastic system, G. S. Bennett—1270(A)
Simplified notation in classical mechanics, H. C. Corben—1270(A)
Symmetric energy-momentum tensor, C. Kikuchi—1271(A)

Elasticity
Age hardening, Herbert M. Meyer—1263(A)
Ductile fracture in notched steel bar, Marguerite M. Rogers and Paul E. Shearin—656(A)
Dislocations, energy of, W. Shockley—1246(A)
Dynamic properties of linear structures, W. James Lyons and Irven B. Prettyman—1232(A)
Effects of pile bombardment on elastomers, W. L. Davidson and I. G. Geib—1225(A)
Elasto-viscous properties of polyisobutylene, R. D. Andrews, N. Hofman-Bang, and A. V. Tobolsky—1221(A)
Of GR-S and Hevea, S. D. Gehman—1224(A)
Long chain molecule liquids, mechanical properties, W. P. Mason, W. O. Baker, H. J. McSkimin and J. H. Heiss—1074
Mechanical properties of rubber-like material, A. W. Nolle—1232(A)
Melting points, rigidities and optical activities of gelatin gels, John D. Ferry and John E. Eldridge—1225(A)
Plastic deformation, statistical theory, W. James Lyons—413(L)
Plastic deformation in brass and aluminum, Andrew W. McReynolds—1262(A)
Rupture of metal foils, Waller George—1262(A)
Rupture of metal foils under constant load, Waller George and George Irwin—1230(A)
Slip along grain boundaries, T'ing-Sui Kê—1235(A)
Of NaCl, KBr, and KCl, J. K. Galt—1460
Stress-induced diffusion of C and O atoms in Ta, T'ing-Sui Kê—1231(A)
Tensile strengths of liquids, J. J. Donoghue, E. Gerjuoy, and R. E. Vollrath—538(A)
Theory of elasticity and anelasticity, Carl Eckart—373
Thermodynamics of strained elastomer, M. Mooney—1224(A); L. E. Copeland and M. Mooney—1224(A)

Electrical circuits
Analytical solution, Mary Gowen Foulks—646(A)
Bridged double T network, C. H. Fay—647(A)
Direct coupled pentode and decade rings, Leo Seren and Lawrence Jones—1228(A)
Graphical solution, S. Leroy Brown—646(A)
Noise in pulse communication, Arnold E. Ross—1126(L)
Response of system, uniformly increasing frequency, H. Ekstein—1228(A)

Electrical conductivity and resistance
Breakdown directions in lithium halide crystals, J. W. Davisson—1196, 1261(A)
Cesium rectifiers, A. W. Hull, E. E. Burger, and R. E. Turrentine—1228(A)
Deuteron-bombarded semiconductors, K. Lark-Horovitz, E. Bleuler, R. Davis, and D. Tendam—1256(A)
Electrical properties of pure silicon and silicon alloys, G. L. Pearson and J. Bardeen—1256(A)
Ferromagnetic semi-conductors, microwave absorption, William H. Hewitt, Jr.—1118(L)
Induced in diamond by alpha-particles, A. J. Ahearn—1113(L)
Magneto-resistance of Bi, Robert F. Blunt—654(A)
Of metals at microwave frequencies, A. B. Pippard, G. E. H. Reuter and E. H. Sondheimer—920(L)
Mobility of electrons in insulators, Frederick Seitz—549

Noise in crystal rectifiers, William Miller—1257(A)
Non-ohmic disks, characteristics of, S. Bloomenthal—1231(A)
Penetration depth in superconductors, Jules de Launay and M. C. Steele—1450
Photoelectric effects, metal semi-conductor contacts, S. Benzer—1256(A)
Pulses in zinc sulfide by alpha particles, A. J. Ahearn—524(L)
r-f resistance of CbN at low temperature, J. V. Lebacqz—1476(L)
Semiconductors as amplifiers, Edmund S. Rittner—1212(L)
Structure and conductivity in the VI_b group, A. von Hippel—1257(A)
Superconducting vanadium, Robert T. Webber and J. M. Reynolds—1264(A)
Superconductivity and Debye characteristic temperature, K. R. Dixit—182(L)
Superconductivity in Ti, Robert T. Webber and J. M. Reynolds—640(L)
Temperature coefficient of $NaNH_3$ solutions, Angus Pearson—655(A)
Temperature-pressure-conductivity relations in semiconductors, F. C. Brown—1257(A)
Two-dimensional potential problem, Don Kirkham—1228(A)
Work function of semiconductors, A. H. Smith and P. H. Miller, Jr.—1256(A)

Electrodynamics (see **Electromagnetic theory**)

Electromagnetic theory
Dielectric wave guide, C. W. Horton—647(A)
Diffraction of electromagnetic waves, W. Owen Tranter—184(L)
Dirac's electron field (Ψ) and Maxwell's electromagnetic field (Φ, A), Frederick J. Belinfante—641(L)
Electron beam wave interaction in a wave guide, Philip Parzen—1268(A)
Electron motion in field of magnetic dipole, S. H. Lachenbruch—1244(A)
Fluctuations of electromagnetic field, T. A. Welton—1271(A)
Force between magnets in medium, John A. Eldridge—1229(A)
Hamiltonian for particle in electromagnetic field, Paul I. Richards—254(L)
Laplace transforms, electromagnetic waves in cylinders, Manuel Cerrillo—647(A)
Light *versus* matter, Gertrude Schwarzmann—1273(A)
Orbits of charged particles, A. H. Taub—786
Propagation characteristics in coaxial structure with two dielectrics, Alfredo Baños, Jr., H. Gruen, and David S. Saxon—531(A)
Reactive terms in quantum electrodynamics, H. W. Lewis—173; Saul T. Epstein—177(L)
Reflection and transmission of waves by a spherical shell, Herbert B. Keller and Joseph B. Keller—1273(A)
Reflections and transmission of waves by curved shells, Joseph B. Keller—1273(A)
Scattering and transmission sections of circular disks and apertures, R. D. Spence—1267(A)
Shift of energy levels, F. J. Dyson—617

Electron affinity
Of C_z, I. Hodes—539(A)

Electron diffraction (see also **Electron optics**)
Of lubricating wax coatings, Chester Ridlon Berry—1117(L)
Refraction for electrons in crystalline media, Lorenzo Sturkey—183(L)
"Schlieren" effect, L. Marton—1244(A)
"Schlieren" effect, applications, D. L. Reverdin, L. Marton, and S. H. Lachenbruch—1244(A)

Electrons (see also **Positrons**)
Charged particle of mass greater than that of electron, M. Hessaby—1128(L)
In atoms, indentity with β-rays, M. Goldhaber and Gertrude Scharff-Goldharber—1472(L)
Intrinsic moment, H. M. Foley and P. Kusch—412(L); Julian Schwinger—416(L)

Electrons, positive (see also **Positive electrons**)

Electrons, secondary
Ejected by ions at high fields, R. R. Newton—1122(L)
Produced by mesons, J. G. Wilson—525(L)
From targets of barium-strontium oxide, J. B. Johnson—1058

Electrons, thermionic (see also **Thermionic emission**)

Electronic tubes
Acceleration of electrons by cylindrical cavities, B. L. Miller and J. M. Wolf—657(A)

Electro-optical effects (see also **Photoelectric effect and properties**)
Crystals of primary phosphate type, Hans Jaffe—95(A)

Electrostriction
In $BaTiO_3$, ceramics, Hans Jaffe—1261(A)

Elements
Absolute nuclear abundances, Harrison Brown—1242(A)
Existence of element 61 in nature, N. E. Ballou—630(L)
Formation of elements inside stars, Gleb Wataghin—79(L)
Origin of elements, R. A. Alpher, H. Bethe, and G. Gamow—803(L)
Relative abundances of nuclei in universe, Paulo Saraiva de Toledo and Gleb Wataghin—79(L)
X-ray evidence for element 43, L. E. Burkhart, W. F. Peed, and B. G. Saunders—347

Energy states of nucleus (see **Nuclear structure**)

Errata
Does the electron have an intrinsic magnetic moment, G. Breit—1410(L)
Interaction of neutrons with electrons, J. M. Jauch and K. Watson—268(L)
Microwave spark, D. Q. Posin—1118(L)
Natural radioactivity of rhenium, S. N. Naldrett and W. F. Libby—487, 929(L)
Neutron-proton scattering at 100 Mev, Julian Eisenstein and Fritz Rohrlich—1411(L)
Reactive terms in quantum electrodynamics, Saul T. Epstein—630(L)

Errata (continued)
Resolving time and genuine coincidence loss for Geiger-Mueller counters, C. E. Mandeville and Morris V. Scherb—639(L)
Second-order corrections to quadrupole effects in molecules, J. Bardeen and C. H. Townes—1204(L)
Tripartition of heavy elements, Tsien San-Tsiang—529(L)
Uncertainty principle and the yield of nuclei formed in fission, P. F. Gast—529(L)
Excitation of nuclei (see **Disintegration and excitation of nucleus; Nuclear structure**)
Explosion phenomena (see also **Shock Waves**)
Energy partition in underwater explosion, D. R. Yennie and A. B. Arons—1253(A)
Oscillation of gas globes, A. B. Arons—1253(A)
Seismic disturbance due to explosion, Norman Ricker—654(A)

Ferromagnetism (see **Magnetic properties**)
Field theory
Gravitational, electromagnetic, and vector meson fields and geometry—Banesh Hoffmann—30, 531(A)
Higher order field equations, Alex E. S. Green—519(L)
Symmetric energy-momentum tensor of Iwanenko-Sokolow field, C. Kikuchi—1271(A)
Films, properties of
Distribution of Po on thin Ag and Bi films, Fred J. Morris and Arthur E. Lockenvitz—649(A)
Fine structure (see **Spectra,** etc. and **Hyperfine structure**)
Fission of nucleus
Of Bi by high energy particles, R. H. Goeckermann and I. Perlman—1127(L)
Coincidences between fission neutrons, S. DeBenedetti, J. E. Francis, Jr., W. M. Preston, and T. W. Bonner—1266(A)
Delayed neutrons from U^{235}, D. J. Hughes, J. Dabbs, A. Cahn, and D. Hall—111; F. de Hoffmann, B. T. Feld, and P. R. Stein—636(L)
Of elements from Pt to Bi, E. L. Kelly and Clyde Wiegand—1135
Meson induced fission, J. A. Wheeler—1252(A)
Of 93^{237}, Arthur C. Wahl and Glenn T. Seaborg—940
Fluid dynamics (see **Hydrodynamics and Aerodynamics**)

Galvanomagnetic effects
Onsager's reciprocal relations, Herbert B. Callen—1349
Semiconductors at high temperature, V. A. Johnson and K. Lark-Horovitz—1257(A)
In tellurium, Wayne Scanlon and K. Lark-Horovitz—1256(A)
Thermionic and galvanomagnetic coefficients, H. B. Callen—1248(A)
Gamma rays (see also **Disintegration and excitation of nucleus; Radioactivity**)
Gases (see also **Kinetic theory**)
Combustion wave in flowing gas, R. J. Dery—1267(A)
Flow around objects in supersonic air stream, R. Ladenburg, J. Winckler and C. C. Van Voorhis—1359
Flows having non-uniform stagnation enthalpy, Crocco's theorems, R. C. Prim—186(L)
Ratio He^3/He^4, Henry A. Fairbank, C. T. Lane, L. T. Aldrich, and Alfred O. Nier—729; 1263(A)
Stability of gas bubbles in water, E. Gerjuoy—538(A)
Geophysics
Gamma-radiation from granite, Victor Francis Hess and J. Donald Roll, S. J.—912
Geomagnetism, effect of moon, Oliver R. Wulf and Seth B. Nicholson—1204(L)
Isotope separation in geological processes, W. H. Furry—1264(A)
Seismic disturbance due to explosion, Norman Ricker—654(A)
Surplus gamma-radiation from rocks, Victor Francis Hess and J. Donald Roll, S. J.—1239(A)
Gravitation
Foundation of Birkhoff's theory, Carlos Graef Fernandez—651(A)
Generalized theory of gravitation, A. Papapetrou—1105
Hypothesis underlying theory, Alberto Barajas—651(A)
Particle on axis of rotating ring, Fernando Alba—651(A)

High voltage tubes and machines (see **Methods and instruments**)
Hydrodynamics
Equations for slip flow, C. Truesdell—1255(A)
Generalization of theorem by Larmor, I. Opatowski—1253(A)
Horizontal eddies in the ocean, George F. McEwen—538(A)
Limiting line phenomenon, W. Perl—1254(A)
Locally isotropic turbulence, Leslie S. G. Kovasznay—1115(L)
Perturbation of steady uniform flow by heat, Bruce L. Hicks—636(L)
Pulse in atmosphere, propagation of, C. L. Pekeris—145
Solitary wave and periodic waves in shallow water, Joseph B. Keller—1254(A)
Spark shadowgrams of spheres at supersonic speeds, J. Howard McMillen and R. L. Kramer—1255(A)
Total vorticity of a continuous medium, C. Truesdell—510
Transfer of energy in continuous media, C. Truesdell—513
Vortices and streams, sound waves, Carl Eckart—68
Wave transmission and reflection in liquid helium II, John R. Pellam—608
Hyperfine structure (see also **Nuclear moments and spin**)
Of chlorine, L. Davis, Jr., B. T. Feld, C. W. Zabel, and J. R. Zacharias—525(L)
Of deuterium, Aage Bohr—1109(L)
Of Ga, G. E. Becker and P. Kusch—531(A), 584
Of hydrogen and deuterium, John E. Nafe and Edward B. Nelson—718, 1243(A)
Of CH_3I and ICN anomalies, O. R. Gilliam, H. D. Edwards, and Walter Gordy—635(L)
Of Np^{237}, F. S. Tomkins—1214(L)
Of K^{40}, Luther Davis, Jr. and Jerrold R. Zacharias—1222(A)
Quadrupole coupling of H in ICN and N_2O, A. G. Smith, Harold Ring, W. V. Smith, and Walter Gordy—633(L)

Instruments (see **Methods and instruments**)
Ionization
By C^{14} radiation in ionization chamber, John W. Otvos—537(A)
Comparison of the relative molecular stopping power of $_1H^1$ and of $_1D^2$, Roland Schmitt, T. N. Hatfield, and Arthur E. Lockenvitz—652(A)
Comparison of the relative molecular stopping power of some hydrocarbon isomers for alpha-particles from Po, Thomas E. Gibbs and Arthur E. Lockenvitz—652(A)
Energy loss in gases and condensed bodies, Otto Halpern and Harvey Hall—477
In divergent fields in H_2 and air, Gerald W. Johnson—284
In Geiger-Mueller tubes, S. J. du Toit—1473(L)
Measurement of the relative molecular stopping power of gases for Po alphas, T. N. Hatfield and M. Y. Colby—652(A)
Polarization effects in carbon, Frank L. Hereford—1123(L)
Ionization potentials
Of hydrocarbon series, Richard E. Honig—1232(A)
Ionosphere
Virtual height at 100 kilocycles, R. A. Helliwell—77(L)
Ions, mobility
Mobility of electrons in insulators, Frederick Seitz—549
Isotopes
Absolute nuclear abundances, Harrison Brown—1242(A)
Of Bi, α-active, D. H. Templeton and I. Perlman—1211(L)
Enrichment of isotopes, gaseous exchange method, R. B. Bernstein and I. I. Taylor—1263(A)
He^3 separation in liquid helium II, C. T. Lane, Henry A. Fairbank, L. T. Aldrich, and Alfred O. Nier—256(L)
Isotopic properties of helium in liquid phase, J. G. Daunt, R. E. Probst, and H. L. Johnston—1263(A)
Hg^{198} from Au, Paul Bradt and Fred L. Mohler—925(L)
Of Mo, Tc activities from bombardment, E. E. Motta and G. E. Boyd—1470(L)
New isotopic effect in liquid helium, J. G. Daunt, R. E. Probst and H. L. Johnston—638(L)
Os^{187} stability against K capture, H. H. Seliger and H. L. Bradt—1408(L)
Of Pl and Au, Geoffrey Wilkinson—252
Ratio of He^3/He^4, Henry A. Fairbank, C. T. Lane, L. T. Aldrich and Alfred O. Nier—729, 1263(A)
Of Rh and Pd, M. Lindner and I. Perlman—1202(L)
Of Sm, Mark G. Inghram, David C. Hess, Jr., and Richard J. Hayden—180(L)
Separation in geological processes, W. H. Furry—1264(A)
Separation of Br and Cl isotopes, L. G. Chelius and C. P. Keim—813(L)
Separation of Li isotopes, Ward Whaling and J. E. Evans—648(A)
Solutions of He^3 in He^4, F. London and O. K. Rice—1188
Of Tc^{43}, isomers, O Huber, P. Marmier, H. Medicus, P. Preiswerk, and R. Steffen—1208(L)
Of Tc^{43}, 62-day, decay scheme, O. Huber, H. Medicus, P. Preiswerk, and R. Steffen—1211(L)
Of Te and Sb, M. Lindner and I. Perlman—1124(L)
Thermal diffusion with neon, F. K. Elder, Jr.—1263(A)
Isotopic composition of xenon, A. H. W. Aten, Jr.—1206(L)
Of Zn and Cd, abundance, Wallace T. Leland and Alfred O. Nier—1206(L)
Isomers, molecular
Analyses of isotopic propanes, D. P. Stevenson—537(A)
Catalytic isomerization of propane containing C^{13}, O. Beeck, J. W. Otvos, D. P. Stevenson, and C. D. Wagner—537(A)
Isomers, nuclear (see **Nuclear structure and Radioactivity**)

Liquids (see also **Hydrodynamics**)
Fluctuations in properties, effect of radiations, George Antonoff, Alexis Yakimac, and Duncan Randall—1230(A); John B. Hawkes and Robert W. Astheimer—520(L)
He^3 separation in liquid helium II, C. T. Lane, Henry A. Fairbank, L. T. Aldrich, and Alfred O. Nier—256(L)
Isotopic properties of helium in liquid phase, J. G. Daunt, R. E. Probst and H. L. Johnston—1263(A)
Long chain molecule liquids, mechanical properties, W. P. Mason, W. O. Baker, H. J. McSkimin, and J. H. Heiss—1074
New isotopic effects in liquid helium, J. G. Daunt, R. E. Probst, and H. L. Johnston—638(L)
Second sound in He II and normal sound, William Band and Lothar Meyer—226
Solutions of He^3 in He^4, F. London and O. K. Rice—1188
Stability of gas bubbles in water, E. Gerjuoy—538(A)
Wave transmission and reflection in liquid helium II, John R. Pellam—608
Luminescence
Of ionic phosphors, Ferd E. Williams—1257(A)

Magnetic fields
Rectangular analogs of Helmholtz coils, J. S. Krohmer and Richard A. Beth—94(A)
Magnetic properties (see also **Nuclear moments and spin**)
Absorption in ferromagnetic semi-conductors, William H. Hewitt, Jr.—1118(L)
Anomalous susceptibilities of zinc crystals, S. G. Sydoriak—1247(A)
Coercive force, particle size, Charles Kittel—810(L)
Energy calculations for domains, W. Shockley—1246(A)
Ferromagnetic domains, L. Marton—1475(L)
Ferromagnetic resonance, D. Polder—1116(L), 1120(L)
Longitudinal magnetostriction, automatic recording, E. A. Nesbitt and H. J. Williams—1246(A)
Magnetic resonance absorption in chrome alums, C. A. Whitmer, R. T. Weidner, and P. R. Weiss—1468(L)
Magneto-resistance of Bi, Robert F. Blunt—654(A)
Nuclear resonance absorption, N. Bloembergen, E. M. Purcell, and R. V. Pound—679
Powder patterns, interpretation, H. J. Williams and R. M. Bozorth—1246(A)
Susceptibility, strain sensitivity, T. S. Hutchison and James Reekie—517(L)
Susceptibility of uranium oxalate, C. A. Hutchison and N. Elliott—1229(A)
Theory of ferromagnetic resonance, D. Polder—1116(L)

Mass Spectroscopy
Beta-ray, design, E. Persico—1475(L)
Mechanics (see **Dynamics**)
Mechanics, quantum—general
Calculation of self-energies, Bertil S. Nilsson—902
Dirac character operators, E. M. Corson—57
Dirac's electron field (Ψ) and Maxwell's electromagnetic field (Φ, A), Frederick J. Belinfante—641(L)
Dirac's one-electron problem, A. Rubinowicz—1330
Dirac's theory of continuous spectra, Aurel Wintner—781
Extension of Dirac's equation, E. L. Hill—907
Influence of retardation on the London-van der Waals forces, H. B. G. Casimir and D. Polder—360
Localizable dynamical systems, P. A. M. Dirac—1092
Nature of low energy radiation, Benjamin Liebowitz—1274(A)
Pair production by γ-rays in electron field, Václav Votruba—1468(L)
Quantized space, Christopher Gregory—806(L)
Reactive terms in quantum electrodynamics, H. W. Lewis—173; Saul T. Epstein—177(L), 630(L)
Relativistic quantum mechanics, Hartland S. Snyder—524(L)
Resonance reactions, Dirac-type incident particles, G. Goertzel—1463
Solutions of radial wave equations, Aurel Wintner—91(L)
Transformation theory applied to radiation field, José A. Balseiro—1346
Virtual quanta, M. Lax and H. Feshbach—1271(A)
Mechanics, quantum—of solid bodies
Theory of ferromagnetic resonance, D. Polder—1116(L)
Mesotrons (see also **Cosmic radiation**)
Absorption curve of mesotrons at 18,200 feet, Marcel Schein and Thomas D. Carr—1227(A)
Capture of mesotrons by protons, F. E. Prieto Calderon—650(A)
Capture of negative mesons, O. Piccioni—411(L)
In cosmic-ray 'stars,' Marcel Schein and Jere J. Lord—189(L), 1252(A)
Decay of negative mesons in light elements, A. March—1205(L)
Differential energy spectrum, M. H. Shamos and M. G. Levy—1396(L)
Disintegration in different absorbers, Norris Nereson—565
East-west asymmetry of the mesotron component at 35,000 feet, Victor H. Yngve, Marcel Schein, and Henry L. Kraybill—1226(A)
Gamma radiation in meson decay, E. P. Hincks and B. Pontecorvo—257(L)
At high altitudes, low energy, Donald C. Moore and Robert B. Brode—532(A)
Infinities in meson-field theory, Alex E. S. Green—26
Life of negative mesons, G. E. Valley and B. Rossi—177(L); W. L. Kraushaar—1408(L)
Mass, J. G. Retallack and R. B. Brode—532(A)
Mean life in NaF, Harold K. Ticho and Marcel Schein—81(L)
Mean life of negative mesotrons, Harold K. Ticho—1226(A)
Meson disintegration into photon and electron, R. D. Sard and E. J. Althaus—1251(A)
Meson induced fission, J. A. Wheeler—1252(A)
Mesons far underground, Kenneth I. Greisen—521(L)
Mesotron decay, J. G. Retallack—921(L)
Mesotrons in stratosphere, Marcel Schein—1227(A)
Multiple production, H. W. Lewis, J. R. Oppenheimer, and S. A. Wouthuysen—127
Negative mesons, stimulated decay, S. T. Epstein, R. J. Finkelstein and J. R. Oppenheimer—1140
Neutral mesons, Kenneth I. Greisen—521(L); R. E. Marshak—1226(A)
Probability of meson track endings, Richard W. Safford—1241(A)
Production in cosmic rays, Geoffrey F. Chew—1128(L)
Slow mesons, decay of, G. E. Valley—1251(A)
Stability of neutral meson, E. P. Hincks and B. Pontecorvo—1122(L)
Trajectories of charged mesons, Banesh Hoffman—1042
Vector meson fields and geometry, Banesh Hoffman—30
Metals (see **Crystalline state**)
Meteorology
Methane in the earth's atmosphere, Marcel V. Migeotte—519(L)
Pulse in atmosphere, C. L. Pekeris—145
Methods and Instruments
Acceleration of electrons by cylindrical cavities, B. L. Miller and J. M. Wolf—657(A)
Amplifiers, use of semiconductors as, Edmund S. Rittner—1212(L)
Analyses of isotopic propanes, D. P. Stevenson—537(A)
Analytical solution of electrical networks, Mary Gowen Foulks—646(A)
Background eradication, fading of latent image, Herman Yagoda and Nathan Kaplan—634(L)
Balancing of sedimentation by electrophoresis, M. L. Randolph—654(A)
Beta-ray spectrography, T. Lauritsen and R. F. Christy—536(A)
Beta-ray spectrograph, helical focusing, C. S. Wu, W. W. Havens, Jr., R. Albert, and G. Grimm—1259(A)
Beta-ray spectrometer, Stanley Frankel—804(L)
Beta-rays detected by scintillations, George B. Collins and Rosalie C. Hoyt—1259(A)
Cesium rectifier, A. W. Hull, E. E. Burger, and R. E. Turrentine—1228(A)
Characteristics of Geiger counters, H. V. Neher—533(A)
Characteristics of non-dissipative electric wave filters, S. Leroy Brown and James M. Sharp—646(A)
Cloud chamber for high altitude operation, R. B. Leighton and Carl D. Anderson—650(A)
Commercial yarn testing, Charles J. Geyer, Jr., C. H. Reichardt, and George Halsey—1224(A)
Conductivity induced in diamond by alpha-particles, A. J. Ahearn—1113(L)
Conductivity pulses in single crystals of zinc sulfide by alpha-particles, A. J. Ahearn—524(L)
Counters, parallel plate, L. Madansky and R. W. Pidd—1215(L)

Counters filled with lead tetramethyl vapor, C. L. Meaker, C. S. Wu, and L. J. Rainwater—1240(A)
Counters, inorganic crystal, Robert J. Moon—1210(L)
Crystal counter, W. Jentschke—77(L)
Cyclotron frequency modulation, K. R. MacKenzie—540(A)
Damping of anodized aluminum, A. Hammond, J. Michener, J. Koehler, and E. Salkovitz—1230(A)
Design for 10-Bev proton synchrotron, M. Stanley Livingston—1258(A)
Detection of radiation by ultra high frequency gas-discharge counters, Sanborn C. Brown—1240(A)
Diamond crystal counters, Robert Hofstadter—631(L); Kathleen Lonsdale—1467(L)
Direct coupled pentode and decade rings, Leo Seren and Lawrence Jones—1228(A)
Distortion in pulse communication, Arnold E. Ross—1126(L)
Dive angle indicator, Donald H. Jacobs—539(A)
Double-focusing mass spectrographs, H. E. Duckworth—543(A)
Electronic analogy computer, M. Shepherd, Jr., J. H. Baldwin, and G. H. Fett—1229(A)
Electronic eyepiece for near infra-red, Zaboj V. Harvalik—1233(A)
Electron multiplier tube for alpha-particles, S. K. Allison and L. del Rosario—1224(A)
Electron optical "Schlieren" effect, D. L. Reverdin, L. Marton, and S. H. Lachenbruch—1244(A)
Electro-optic effects in phosphate crystals, Hans Jaffe—95(A)
Electrostatic generator, W. E. Danforth, E. L. Hudspeth, C. E. Mandeville, and C. P. Swann—1413
Exploring the smoothness of surfaces, Robley C. Williams—1222(A)
External beam of electrons from betatron, L. S. Skaggs, J. S. Laughlin, and L. H. Lanzl—1223(A)
Fast modulation effects in optical region, Arthur Ruark—181(L)
Field distribution in linear accelerator, Wolfgang K. H. Panofsky, Chaim Richman, and Frank Oppenheimer—535(A)
Focusing in cross fields, relativistic energies, Walter E. Millett—1259(A)
Fourier equations for x-ray studies, Dan McLachlan, Jr.—539(A)
Four million-volt electrostatic generator, Clarence Turner, Bruce Cork, Joseph Ballam, and Hayden Gordon—534(A)
Frequency modulated cyclotron, J. Reginald Richardson, Byron T. Wright, E. J. Lofgren, and Bernard Peters—424
Geiger-Mueller tubes, effect of composition of gases, S. J. du Toit—1473(L)
Graphical evaluation of Jacobi polynomials, S. Leroy Brown and Mary Gowen Foulks—539(A)
Graphical solution of non-linear simultaneous equations, James M. Sharp and S. Leroy Brown—646(A)
Grazing incidence reflectors, Paul Kirkpatrick, A. V. Baez, and Allen Newell—535(A)
High frequency corona, M. D. O'Day and E. H. Cullington—543(A)
High pressure cloud chamber, T. H. Johnson and R. P. Shutt—1240(A)
High voltage vacuum-tube voltmeter, Luke C. L. Yuan—1273(A)
Hot wire anemometer at high frequency, Eli Ossofsky—410(L)
Imperfections in diffraction gratings, U. Fano and R. D. Huntoon—1233(A)
Induction accelerator for a proton synchrotron, John P. Blewett—1258(A)
Intensity regulator for hydrogen discharge tube, W. L. Pondrom and W. W. Robertson—652(A)
Ion orbit control for synchrotron, C. K. Green—1258(A)
Ion source equipment for electrostatic generator, Franklin Fillmore, Arthur Hudgins, and Morris Jeppson—534(A)
Ion source for mass comparisons, A. E. Shaw—1222(A)
Least squares and x-ray crystal structure analysis, W. J. Taylor—1262(A)
Light scattering in supersonic streams, J. H. McQueen, J. W. Beams, and L. B. Snoddy—260(L)
Linear accelerator, beam dynamics, Robert Serber—535(A)
Linear accelerator oscillator and coupling system, W. R. Baker, J. V. Franck, and J. D. Gow—535(A)
Linear accelerator, physical design, Hugh Bradner, Richard Crawford, Hayden Gordon, and John R. Woodyard—534(A)
Longitudinal magnetostriction, automatic recording, E. A. Nesbitt and H. J. Williams—1248(A)
Low noise power amplifier, H. S. Sommers, Jr., P. R. Weiss, and W. Halpern—1243(A)
Magnetic circuit for a proton synchrotron, Wm. H. Moore and John P. Blewett—1258(A)
Measurement of small time intervals, J. W. Keuffel—531(A)
Mesotron mass measurements, R. B. Brode—533(A)
Method for determining maximum β-energies, L. Yaffe and Katharine M. Justus—1400(L)
Microphotometer for x-ray diffraction diagram, T. Pepinsky and H. I. West, Jr.—1235(A)
Microwave accelerator, G. A. Kolstad, H. L. Schultz, and C. G. Montgomery—1258(A)
Neutron absorption by Clinton pile oscillator, J. I. Hoover, W. H. Jordan, C. D. Moak, L. A. Pardue, H. Pomerance, J. Strong, and E. O. Wollan—1259(A)
Nuclear magnetic moments, John R. Zimmerman and Dudley Williams—94(T), 94(A)
Outgassing and evaporation of Sb, R. L. Longini—1231(A)
Pair production spectrometer for gamma-rays, Nelson James Terrell, Jr.—647(A)
Path length through cosmic-ray telescope, Enos E. Witmer and Martin A. Pomerantz—651(A)
Photo-tubes in ultraviolet fluorescence, Robert D. Cowan—1234(A)
Plasma sheaths as variable capacitances, W. E. Parkins and J. M. Leffler—538(A)

Methods and Instruments (continued)
Protective facings on Eastman emulsions, P. B. Mauer and H. L. Reynolds—1131(L)
Pulse transformer, coincidence counting, B. G. Farley—1240(A)
Real and complex roots of polynomials, mechanical harmonic synthesizer, Robert G. Packard and S. Leroy Brown—646(A)
Rebuilding of metal counting tubes, G. E. Hagen and D. H. Loughridge—1131(L)
Rectangular analogs of Helmholz coils, Richard A. Beth and J. S. Krohmer—94(T), 94(A)
Resolving time, coincidence loss for counters, C. E. Mandeville and Morris V. Scherb—90(L)
Resolving time for counters, erratum, C. E. Mandeville and Morris V. Scherb—639(L)
Response time in vacuum gauges, S. A. Schaaf and R. R. Cyr—1253(A)
Rice Institute Van de Graaff generator, H. A. Wilson—647(A)
Rocket flame velocity by Doppler shift, F. P. Bundy—1267(A)
Scintillation counters for beta- and gamma-rays, Martin Deutsch—1240(A)
Scintillation counters, self-delayed coincidences, S. DeBenedetti, F. K. McGowan, and J. E. Francis, Jr.—1269(L)
Scintillation counters, use of anthracene, P. R. Bell—1405(L)
Self-quenching counters, M. V. Scherb—86(L), 650(A); C. D. Thomas—1227(A); S. S. Friedland and A. D. Krumbein—1227(A)
Separation of He^3, C. T. Lane, Henry A. Fairbank, L. T. Aldrich, and Alfred O. Nier—256(L)
Separation of Li isotopes, Ward Whaling and J. E. Evans—648(A)
Shaped field for 180° spectrograph, F. M. Beiduk and E. J. Konopinski—1229(A)
Silver chloride as detector, W. L. Whittemore and J. C. Street—543(A)
Slow-neutron monitoring, Maurice M. Shapiro and John R. Barnes—1243(A)
Solution of network impedances with mechanical harmonic synthesizer, S. Leroy Brown—646(A)
Stabilization of 10,000-oersted magnetic field, D. S. Hughes, W. L. Pondrom, and G. B. Thurston—647(A)
Temperature controller, J. C. Mouzon—1267(A)
Tensile strengths of liquids, J. J. Donoghue, E. Gerjuoy, and R. E. Vollrath—538(A)
Thermionic emission of oxide-coated cathodes in gaseous conduction devices, W. F. Hodge—95(A)
30-Mev betatron, E. C. Gregg, Jr.—94(T), 95(A)
Time moments for Markoffian random functions, A. J. F. Siegert—1271(A)
Transducer measurements of the mechanical properties of polymer solutions, Thor L. Smith, John D. Ferry, and Frederic W. Schremp—1233(A)
Traveling wave amplifier, D. L. Benedict—1246(A)
Two-dimensional potential problem, Don Kirkham—1228(A)
Ultraviolet transmission of diamonds, counting characteristics, H. Friedman, L. S. Birks, and H. P. Gauvin—186(L)
Wide-band pulse amplifier, H. Gunther Rudenberg—543(A)
X-ray diffraction camera, high temperature, James W. Edwards, Rudolph Speiser, and Herrick L. Johnston—1251(A)
X-ray optical images, Paul Kirkpatrick and A. V. Baez—1234(A)
Yale linear electron accelerator, H. L. Schultz, J. A. Lockwood, R. L. McCarthy, and P. J. Rice—1259(A)

Microwaves (see also **Electromagnetic theory; electronic tubes; spectra, microwave**)
Absorption in ferromagnetic semiconductors, William H. Hewitt, Jr.—1118(L)
Detection methods, John Rogers, Richard J. Watts, and Dudley Williams—1230(A)
Discharge in gases at high frequencies, H. Margenau—297; H. Margenau and L. M. Hartman—309; L. M. Hartman—316; H. Margenau—326
Ferromagnetic resonance absorption, Charles Kittel—155
Microwave frequencies, electrical phenomena in gases, W. P. Allis—1239(T)
Microwave resonance lines, broadening of, Paul I. Richards and Hartland S. Snyder—269(L)
Microwave spark, D. Q. Posin—496, 1118(L)
Radiofrequency conductivity of plasmas, Ladislas Goldstein and Nathanial L. Cohen—83(L)
Results and semitheoretical calculations in breakdown, D. Q. Posin—1245(A)
R-f absorption lines in solids, J. H. Van Vleck—1229(A)
Spectrum of ammonia, saturation effects—Robert Karplus—1120(L)
Stark splitting, absorption in paramagnetic salts, C. Kittel and J. M. Luttinger—162

Molecular structure and constants (see also **Spectra, molecular,** etc., and **Raman spectra**)
Force constants and Raman frequencies of methylbromoacetylene and methyliodoacetylene, Arnold G. Meister—1234(A)
Interconversion of ortho- and para-deuterium, deuteron quadrupole moment, Morton Hamermesh—638(L)
Magnetic field of a rotating molecule, G. C. Wick—51
Molecular orbitals for methane and ethane, F. A. Matsen—653(A)
States of diatomic molecules, fine structure, A. Budó and I. Kóvacs—1120(L)
Systems containing light positive particle, Aadne Ore—1313

Necrology
Willard Leslie Severinghaus, H. W. Farwell—642(L)

Neutrino (see also **Radioactivity; Scattering of electrons, neutrons and ions**)
Beta-decay of Y 90, Chalmers W. Sherwin—1173
Equations of the neutrino, Nathan Rosen—1272(A)
Mass, actual and inert, Gertrude Schwarzmann—1274(A)
Mass, from β-spectrum of S^{35}, C. Sharp Cook, Lawrence M. Langer, and H. Clay Price, Jr.—1395(L)

Mass from He^3 (n, p) H^3, D. J. Hughes and C. Eggler—809(L), 1242(A)
H^3 and mass of neutrino, John R. Pruett—1219(A)
Momentum conservation in the beta-decay of P^{32}, Chalmers W. Sherwin—216, 1219(A)

Neutrons
Al (αn) and Si (dn) spectra, R. A. Peck, Jr.—1264(A)
In atmosphere, Serge A. Korff, M. S. George, and J. W. Kerr—1133(L)
Coincidences between fission neutrons, S. DeBenedetti, J. E. Francis, Jr., W. M. Preston, and T. W. Bonner—1266(A)
Cross sections of H, D, F, Mg, S, Si, and quartz for slow neutrons, L. J. Rainwater, W. W. Havens, Jr., J. R. Dunning, and C. S. Wu—733
Delayed neutrons from U^{235}, D. J. Hughes, J. Dabbs, A. Cahn, and D. Hall—111
Density in atmosphere, latitude dependence, J. A. Simpson, Jr.—1389(L)
Diffusion in hydrogenous media, C. W. Tittle and Clark Goodman—1264(A)
Evidence for di-neutron, D. N. Kundu and M. L. Pool—22
Fast continuous energy neutrons, V. L. Parsegian, L. V. Titone, and C. W. van der Merwe—1265(A)
High energy collisions with protons, H. S. W. Massey, E. H. S. Burhop, and Tsi-Ming Hu—1403(L)
Interaction with electrons, erratum, J. M. Jauch and K. Watson—268(L)
Laue photography, E. O. Wollan, C. G. Shull, and M. C. Marney—527(L), 1265(A)
Neutron absorption by Clinton pile oscillator, J. I. Hoover, W. H. Jordan, C. D. Moak, L. A. Pardue, H. Pomerance, J. Strong, and E. O. Wollan—1259(A)
Neutron-proton scattering formula, L. Eisenbud—1407(L)
Polarizability in electrostatic field, Kenneth M. Watson—125
Polarization in magnetized iron, D. J. Hughes, J. R. Wallace, and R. H. Holtzman—1277
Polarization of fast neutrons, Julian Schwinger—407
Recoil protons in neutron beam of 184-inch cyclotron, Wilson M. Powell—540(A)
Resonance absorption in graphite, S. Bernstein—956
Slow cross sections in O_2, N_2, A, E. Melkonian, L. J. Rainwater, W. W. Havens, Jr., and J. R. Dunning—1399(L)
Slow neutron studies of Cu, Ni, Bi, Fe, Sn, and calcite, W. W. Havens, Jr., L. J. Rainwater, C. S. Wu, and J. R. Dunning—963
Spectra from Al (αn) and Si (dn), R. A. Peck, Jr.—947
Thermal neutron absorption by separated isotopes, H. Pomerance and J. I. Hoover—1265(A)
Transmission through solid solutions, S. S. Sidhu—1264(A)
Of various elements, cross sections, Edward Melkonian—1265(A)
Velocity spectrometer studies, crystal interference and molecular binding effects, W. W. Havens, Jr., L. J. Rainwater, and C. S. Wu—1265(A)
Velocity spectrometer studies of Fe, Ni, and Cu, L. J. Rainwater, W. W. Havens, Jr., and C. S. Wu—1265(A)
Yields from photo-neutron sources, B. Russell, D. Sachs, A. Wattenberg, and R. Fields—545

Neutron Diffraction
By crystalline powders, E. O. Wollan and C. G. Shull—830
In NaH and NaD, C. G. Shull, E. O. Wollan, G. A. Morton, and W. L. Davidson—842
Laue photography of, C. G. Shull, M. C. Marney, and E. O. Wollan—1265(A)

Nuclear moments and spin (see also **Hyperfine structure**)
Of C^{14}, Arthur Roberts—1405(L)
Of chlorine, L. Davis, Jr., B. T. Feld, C. W. Zabel, and J. R. Zacharias—525(L)
Of deuterium, Aage Bohr—1109(L)
As integral multiples of a natural unit, Enos E. Witmer—1243(A)
Interpretation of triton moment, R. G. Sachs—1222(A)
Of I^{127}, Ga^{69}, Ga^{71}, and P^{31}, R. V. Pound—1112(L)
Magnetic exchange moment for He^3 and H^3, Herbert L. Anderson—919(L)
Magnetic moments of Cu^{63} and Cu^{65}, R. V. Pound—523(L)
Magnetic moment of He^3, H. L. Anderson and A. Novick—919(L)
Magnetic resonance absorption in chrome alums, C. A. Whitmer, R. T. Weidner, and P. R. Weiss—1468(L)
Measuring moments, John R. Zimmerman and Dudley Williams—94(T), 94(A)
Microwave Zeeman spectra, C. K. Jen—1248(A)
Moment of H^3 and He^3, Armin Thellung and Felix Villars—924(L)
Nuclear induction signals, Boris A. Jacobsohn and Roald K. Wangness—942
Quadrupole effects in molecules, J. Bardeen and C. H. Townes—97, 1204(L)
Quadrupole moments in asymmetric rotor molecules, J. K. Bragg—1250(A)
Quadrupole coupling of N in ICN and N_2O, A. G. Smith, Harold Ring, W. V. Smith, and Walter Gordy—633(L)
Quadrupole effects, second-order corrections, J. Bardeen and C. H. Townes—627(L)

Nuclear structure (see also **Disintegration of nucleus; Energy states of nucleus; Radioactivity**)
Of Be^9, excited state, K. E. Davis and E. M. Hafner—1473(L)
Binding energy of triton, M. Goeppert-Mayer and R. G. Sachs—185(L)
Of B^{10}, T. Lauritsen, W. A. Fowler, C. C. Lauritsen, and V. K. Rasmussen—636(L)
Charge distribution in nuclei, M. E. Rose—279, 1242(A)
Deuteron problem with Gaussian potentials, S. Moszkowski and R. G. Sachs—184(L)
Energy levels of A^{41}, Ernest Pollard and Perry W. Davison—1241(A)
Formation of elements inside stars, Gleb Wataghin—79(L)
Interactions of nucleons with meson fields, F. J. Dyson—929(L)

Nuclear structure (continued)
Interpretation of triton moment, R. G. Sachs—1222(A)
Isomer of Tc^{43}, O. Huber, P. Marmier, H. Medicus, P. Preiswerk, and R. Steffen—1208(L)
Limits of beta-stability, Truman P. Kohman—16
Of 93^{237}, Arthur C. Wahl and Glen T. Seaborg—940
Polarization correlation of gamma-rays, David L. Falkoff—518(L)
Spherical shell nuclear model, H. A. Wilson—655(A)
Spin of C^{14}, F. A. Jenkins—639(L)
Tensor forces and binding energy of triton, W. Rarita and H. Feshbach—1272(A)
Zero-zero transitions, isomers, Marvin L. Goldberger—1119(L)

Optical constants and properties
Of $BaTiO_3$, B. Matthias and A. von Hippel—268(L)
Dichroism involving aligned CH_2 groups, Leonard Glatt—535(A)
Dichroism involving hydrogen bonds, Leonard Glatt—541(A)
Fluctuations in refractivity of water, John B. Hawkes and Robert W. Astheimer—520(L)
Grazing incidence reflectors, Paul Kirkpatrick, A. V. Baez, and Allen Newell—535(A)
Melting points, rigidities, and optical activities of gelatin gels, John D. Ferry and John E. Eldridge—1225(A)
Streaming birefringence of nucleic acid, Jesse P. Greenstein—1225(A)
Optical instruments (see **Methods and instruments**)

Packing fraction (see also **Isotopes**)
Of zirconium, Wilfrid Rall—1222(A)
Phosphorescence
Excitation of infra-red phosphors by α- and β-particles, R. H. Thompson and R. T. Ellickson—185(L)
Photo-conductivity
Of inorganic crystals, detection of high energy particles, Robert J. Moon—1210(L)
Of semiconductors, use as amplifiers, Edmund S. Rittner—1212(L)
Photoelasticity
Constants of cubic crystals, E. Burstein, P. L. Smith, and B. Henvis—1262(A)
Photoelectric effect and properties; cells
Beat frequencies between visible lines, L. R. Griffin—922(L); Edward Gerjuoy, A. Theodore Forrester, and William E. Parkins—922(L)
Energy distribution from W, L. Apker, E. Taft, and J. Dickey—46
(γ, p) and (γ, m) processes, L. I. Schiff—1311
Metal semiconductor contacts, S. Benzer—1256(A)
Self-quenching counters, M. V. Scherb—86(L)
Photography
Background eradication, fading of latent image, Herman Yagoda and Nathan Kaplan—634(L)
Protective facings on Eastman emulsions, P. B. Mauer and H. L. Reynolds—1131(L)
Piezoelectric effect
Constants of monoclinic crystals, Hans Jaffe—1467(L)
In barium titanate ceramics, W. P. Mason—1398(L)
Piezoelectric effect in barium titanate, Walter L. Cherry, Jr. and Robert Adler—1230(A)
Polarization, electrical (see also **Dielectric constants**)
Neutron polarization, D. J. Hughes, J. R. Wallace, and R. H. Holtzman—1277
Polarization effects in ionization loss, Frank L. Hereford—1123(L)
Polarization of radiation
Of annihilation radiation, E. Bleuler and H. L. Bradt—1398(L)
Light scattered by macromolecular solutions, Paul Doty and S. J. Stein—1221(A)
Polymerization, properties of polymers
Disorder in linear polymers, S. T. Gross—1233(A)
Effects of pile bombardment on elastomers, W. L. Davidson and I. G. Geib—1225(A)
Elasto-viscous properties of polyisobutylene, R. D. Andrews, N. Hofman-Bang, and A. V. Tobolsky—1221(A)
Mechanical properties of polymer solutions, Thor L. Smith, John D. Ferry, and Frederic W. Schremp—1233(A)
Mechanical properties of rubber-like materials, A. W. Nolle—1232(A)
Melting points, rigidities, and optical activities of gelatin gels, John D. Ferry and John E. Eldridge—1225(A)
Surfaces of polymers, Robley C. Williams—1222(A)
Positrons
Low energy pair production, P. V. C. Hough—266(L)
Molecular systems containing a positron, Aadne Ore—1272(A)
Proceedings of the American Physical Society
Oberlin College, Ohio, Meeting November 1, 1947—94
Union College, New York, Meeting November 8, 1947—96
Los Angeles, California, Meeting January 2–3, 1948—530
New England Section, Middletown, Connecticut, Meeting November 1, 1947—542
Rice Institute, Houston, Texas, Meeting November 28–29, 1947—644
Chicago, Illinois, Meeting December 29–31, 1947—1217
New York, Annual Meeting January 29–31, 1948—1237
Protons
Recoil protons in neutron beam of 184-inch cyclotron, Wilson M. Powell—540(A)

Radiation
Annihilation, polarization of quanta, E. Bleuler and H. L. Bradt—1398(L)
Radio (see also Ionosphere)
Antenna current distribution, Richard C. Raymond and Wayne Webb—1248(A)
Radioactivity (see also **Disintegration of nucleus**)
Absorption of Be^{10} beta-rays, William E. Stephens and A. M. Bottoms—1269(A)
Absorption of Na^{24} gamma-radiation in Pb, Cu, and Al, David E. Alburger—344
α-particles from faces of radioactive crystals, K. B. Mather and F. N. D. Kurie—1474(L)

Alpha-rays from Sm, A. J. Dempster—1125(L)
Angular correlation of γ-rays, Edward L. Brady and Martin Deutsch—1266(A)
Of Sb^{124}, Bernard D. Kern, Daniel J. Zaffarano, and Allan C. G. Mitchell—1142
Of Sb^{124}, coincidence experiments, E. T. Jurney and Allan C. G. Mitchell—1153, 1269(A)
Of As^{76}, M. V. Scherb and C. E. Mandeville—418(L)
Beta- and gamma-rays from Sb, C. Sharp Cook and Lawrence M. Langer—1149
Beta- and gamma-rays of Ga^{72}, A. C. G. Mitchell, B. D. Kern, and D. J. Zaffarano—1220, 1431(A)
Beta-decay of Kr^{88}, recoil of nucleus, J. C. Jacobsen and O. Kofoed-Hansen—675
Beta-decay of P^{32}, correlation of neutrinos with electrons, Chalmers W. Sherwin—1219(A)
β-emission, Kurie plot, F. N. D. Kurie—1207(L)
Beta-rays detected by scintillations, George B. Collins and Rosalie C. Hoyt—1259(A)
Beta-rays of Sb, C. E. Mandeville and Morris V. Scherb —656(A)
Beta-spectra of Cu^{64} as a test of Fermi theory, C. Sharp Cook and Lawrence M. Langer—601, 1219(A)
Beta-spectrum of Au^{198}, D. Saxon—811(L)
Of Bi isotopes, α-active, D. H. Templeton and I. Perlman—1211(L)
Of B^{10}, T. Lauritsen, W. A. Fowler, C. C. Lauritsen, and V. K. Rasmussen—636(L)
C^{14} beta-ray spectrum, Margaret N. Lewis and Miriam Paul—1269(A)
C^{14} of high specific activity, L. D. Norris and Arthur H. Snell—254(L)
Of Ce and Pr, M. L. Pool and N. L. Krisberg—1035
Coincidence expriments on Sc^{46} and Au^{198}, E. T. Jurney and Margaret R. Keck—1220(A)
Comparison of the relative molecular stopping power of $_1H^1$ and of $_1D^2$, Roland W. Schmitt, T. N. Hatfield, and Arthur E. Lockenvitz—652(A)
Comparison of the relative molecular stopping power of some hydrocarbon isomers for alpha-particles from Po, Thomas E. Gibbs and Arthur E. Lockenvitz—652(A)
Coincidence measurements in Sb^{124}, E. T. Jurney and Allan C. G. Mitchell—1269(A)
Continuous γ-radiation during β-decay, C. S. Wang and D. L. Falkoff—1220(A)
Correlation between beta- and gamma-emissions, D. L. Falkoff and G. E. Uhlenbeck—649(A)
Decay of fission products, K. Way and E. P. Wigner—1318
Disintegration scheme of Cs^{134}, Kai Siegbahn and Martin Deutsch—410(L)
Energies of alpha-particles from Pu^{238} and Pu^{239}, William P. Jesse and Harold Forstat—926(L)
Existence of element 61 in nature, N. E. Ballou—630(L)
54-minute isomer of In, Morris V. Scherb and C. E. Mandeville—655(A)
Of Ga^{72}, β- and γ-rays, Allan C. G. Mitchell, Daniel J. Zaffarano, and Bernard D. Kern—1424
Of Ga^{72}, β- and γ-spectra, S. K. Haynes—187(L), 1269(A)
Gamma-radiation from granite, Victor Francis Hess and J. Donald Roll, S. J.—592, 912; Wm. D. Urry—596
Gamma-radiation from Eu, J. M. Cork, R. G. Shreffler, and C. M. Fowler—78(L)
Gamma-radiation in meson decay, E. P. Hincks and B. Pontecorvo—257(L)
Gamma-radiations from Co^{60} and Zn^{65}, Erling N. Jensen, L. Jackson Laslett, and William W. Pratt—529(L)
Gamma-radiation from Sc, Ce, and Tb, J. M. Cork, R. G. Shreffler, and C. M. Fowler—1220(A)
Gamma-rays from alpha-particle reactions, David E. Alburger—1014
Gamma-rays from Au (198), wave-length and energy measured with x-ray spectrometer, Jesse W. M. DuMond, David A. Lind and Bernard B. Watson—1392
Of Au^{198}, coincidence study, C. E. Mandeville and M. V. Scherb—634(L)
Half-life of C^{14}, L. D. Norris and M. G. Inghram—350
Internal conversion in W and Pt, M. V. Scherb and C. E. Mandeville—1401(L)
Of Ir^{192}, R. D. Hill and W. E. Meyerhof—812(L)
Of Ir^{192}, Ir^{194}, La^{140}, Sb^{124}, Zr^{95}, C. E. Mandeville and M. V. Scherb—1434
Isomers in Tm^{169} and Tm^{171}, F. K. McGowan and S. DeBenedetti—1269(A)
Isomers of Ba^{133}, Fu-Chum Yu and J. D. Kurbotov—1268(A)
Of Li^8, T. W. Bonner, J. E. Evans, C. W. Malich, and J. R. Risser—884
Maximum energies of β-emitters, L. Yaffe and Katharine M. Justus—1400(L)
Measurement of the relative molecular stopping power of gases for Po alphas, T. N. Hatfield and M. Y. Colby—652(A)
Metastable state in "even-even" nucleus, J. C. Bowe, M. Goldhaber, R. D. Hill, W. E. Meyerhof, and O. Sala—1219(A)
Of Mo^{99} and Tc^{99}, C. E. Mandeville and M. V. Scherb—847, 1270(A)
Momentum conservation in the beta-decay of P^{32}, correlation of neutrinos with electrons, Chalmers W. Sherwin—216
Multiple nuclear isomerism, E. Der Mateosian, M. Goldhaber, C. O. Muehlhause, and M. McKeown—1219(A)
Neutron induced activities in Er, B. H. Ketelle and W. C. Peacock—1269(A)
Of 93^{237}, Arthur C. Wahl and Glenn T. Seaborg—940
Polarization correlation of gamma-rays, David L. Falkoff—518(L)
Positron-electron ratio in Cu^{64}, L. Cranberg and J. Halpern—259(L), 1269(A)
Of K^{40}, decay scheme, Hans E. Suess—1209(L)
Properties of Ta^{182}, C. E. Mandeville and Morris V. Scherb—656(A)
Radiations from Sb^{124}, M. V. Scherb and C. E. Mandeville—1268(A); C. Sharp Cook and Lawrence M. Langer—1268(A); Bernard D. Kern, Daniel J. Zaffarano and Allan C. G. Mitchell—1268(A)
Of Re, S. N. Naldrett and W. F. Libby—487; 929(L); Nathan Sugarman and Harold Richter—1411(L)
Of Sc^{46}, C. E. Mandeville and Morris V. Scherb—648(A)

Radioactivity (continued)
Of Sc^{46} and Ti^{51}, C. E. Mandeville and Morris V. Scherb—141
Of Se^{73} and Se^{75}, William S. Cowart and M. L. Pool—1223(A)
Se^{73} and Se^{75}, artificially radioactive, William S. Cowart, M. L. Pool, D. A. McCown, and L. L. Woodward—1454
7-second Au^{197} isomer, H. Frauenfelder, P. C. Gugelot, O. Huber, H. Medicus, P. Preiswerk, P. Scherrer, and R. Steffen—1270(A)
72-day isomer of Ti^{51}, C. E. Mandeville and Morris V. Scherb—654(A)
62-day Tc isotope, O. Huber, H. Medicus, P. Preiswerk, and R. Steffen—1211(L)
Surplus gamma-radiation from rocks, Victor Francis Hess and J. Donald Roll, S. J. —1239(A)
Of Ta^{182}, Sb^{122}, and In^{116}, C. E. Mandeville and Morris V. Scherb—340
Of Tc isotopes, E. E. Motta and G. E. Boyd—1470(L)
Of Te and Sb, M. Lindner and I. Perlman—1124(L)
Of 2.70-day Au^{198}, Paul W. Levy and E. Greuling—83(L)
Weak natural radioactives, Truman P. Kohman—1223(A)
X-ray yield curves for $\gamma-n$ reactions, G. C. Baldwin and G. S. Klaiber—1156(A)
Of Y 90, beta-decay, Chalmers W. Sherwin—1173
Raman spectra
Of hexamethylethane, Richard W. Mitchell and Forrest F. Cleveland—653(A)
Range of particles
Of β-radiation from Ca^{45}, A. K. Solomon and L. E. Glendenin—415(L)
$D+D$ cross sections, A. P. French—1474(L)
Of $Ra-\alpha-Be$ neutrons in water, J. T. Rush—271
Range-energy relations for protons in C, H, O, A, and Xe, J. O. Hirschfelder and J. L. Magee—207
Rectifier (see **Electrical conductivity and resistance**)
Relativity
Discrete space-time and integral Lorentz transformation, A. Schild—414(L)
Equivalence principle and blind navigation, John J. Gilvarry—1409(L)
Extension of Dirac's equation, E. L. Hill—907
Foundation of Birkhoff's theory of gravitation, Carlos Graef Fernandez—651(A)
Generalized theory of gravitation, A. Papapetrou—1105
Mass-energy relation, W. F. G. Swann—1270(A)
Relativistic quantum mechanics, Hartland S. Snyder—524(L)
Resonance radiation
Imprisonment in gas discharges, T. Holstein—1245(A)
Of K, violet asymmetry, Shang-yi Ch'en—1470(L)

Scattering of electrons, neutrons, and ions (see also **Electron diffraction cross section**)
C^{12} $(n, 2n)$ C^{11} at 90 Mev, Edwin M. McMillan and Herbert F. York—262(L)
Correlated probabilities in multiple scattering, W. T. Scott and H. S. Snyder—1260(A)
$D+D$ cross sections, A. P. French—1474(L)
Determinations of XR for high energy particles, F. T. Rogers, Jr.—656(A)
Of fast neutrons by Fe, Pb, and Bi, L. Szilard, S. Bernstein, B. Feld, and J. Ashkin—1307
Of fast neutrons by Hg, G. C. Phillips and J. C. Harris—649(A)
Of high energy electrons, M. E. Rose—279
Of high energy neutrons, A. Bratenahl, R. H. Hildebrand, and B. J. Moyer—540(A)
Inelastic scattering of protons, Kenneth E. Davis and Everett M. Hafner—1473(L)
Ionization loss of fast charged particles, Otto Halpern and Harvey Hall—477
Milne problem for a sphere, T. H. Berlin—437
Monoenergetic neutrons on sulfur, E. D. Klema and A. O. Hanson—106
$N-p$ scattering, angular distribution, J. Hadley, E. L. Kelly, C. E. Leith, E. Segrè, C. Wiegand, and H. F. York—1114(L)
Neutron-proton scattering at high energies, G. F. Chew and M. L. Goldberger—1409(L)
Neutron-proton scattering formula, S. Flügge and E. Hückel—520(L); Ta-You Wu and Henry M. Foley—1117(L)
Neutron-proton and proton-proton scattering at high energies, Julius Ashkin and Ta-You Wu—973
Neutron-proton scattering at 90 Mev, J. Hadley, C. Leith, H. York, E. Kelly, and C. Wiegand—541(A)
Neutron-proton scattering at 100 Mev, Julian Eisenstein and Fritz Rohrlich—641(L), 1411(L)
Neutron-proton scattering formula, L. Eisenbud—1407(L)
Neutron-proton scattering, range of nuclear forces, Ta-You Wu—1132(L)
Of neutrons by protons, J. S. Laughlin and P. G. Kruger—649(A)
Of neutrons by protons, 12–13 Mev, J. S. Laughlin and P. G. Kruger—197
Of neutrons by protons, 20–80 Mev, M. Camac and H. A. Bethe—191
Of neutrons, from protons, high energy, H. S. W. Massey, E. H. S. Burhop, and Tsi-Ming Hu—1403(L)
Of 100–200 Mev protons or neutrons by deuterons, Ta-You Wu and Julius Ashkin—986
Phase-shift analysis, scattering of protons by deuterons, Charles L. Critchfield—1
Proton-neutron and proton-proton scattering, second Born approximation, Ta-You Wu—934
Proton-proton scattering at 2.4 and 3.0 Mev, William Sleator, Jr., J. M. Blair, E. E. Lampi, and J. H. Williams—1241(A)
Proton-proton scattering at 7 Mev, I. H. Dearnley, C. L. Oxley, and J. E. Perry, Jr.—1290
Proton-proton scattering, sensitivity to change in potential, G. Breit, A. A. Broyles, and M. H. Hull—870
Of protons by deuterons, H. S. W. Massey and R. A. Buckingham—260(L)
Of protons, energy distribution, Warren W. Chupp, Eugene Gardner, and T. B. Taylor—742

Of protons, excited state of Be^9, K. E. Davis and E. M. Hafner—1473(L)
Proton scattering by Be, George S. Kenny and Sylvan Rubin—536(A); R. G. Thomas, W. A. Fowler, and C. C. Lauritsen—536(A)
Range of forces, neutron-proton triplet interaction, C. G. Shull, E. O. Wollan, G. A. Morton, and W. L. Davidson—262(L)
Resonance reactions, Dirac-type incident particles, G. Goertzel—1463
Scattering by attractive center varying inversely as cube of distance, H. A. Wilson—655(A)
Sensitivity of proton-proton scattering, G. Breit, A. A. Broyles, and M. H. Hull—1242(A)
Scattering of radiation (see also **Raman spectra**)
Angular correlation of annihilation radiation, Hartland Snyder, Simon Pasternack, and J. Hornbostel—440
Light scattered by macromolecular solutions, depolarization, Paul Doty and S. J. Stein—1221(A)
Penetration of gamma-radiation, Klein-Nishina scattering, J. O. Hirschfelder, J. L. Magee, and M. H. Hull—852
Penetration of gamma-radiation, photoelectric effect, and pair production in Fe and Pb, J. O. Hirschfelder and Edward N. Adams II—863
Scattering by a plane-parallel atmosphere, S. Chandrasekhar—1233(A)
Semiconductors (see **Electrical conductivity and resistance**)
Shock waves (see also **Explosion phenomena**)
Spark shadowgrams of spheres at supersonic speeds, J. Howard McMillen and R. L. Kramer—1255(A)
Velocity loss of shocks traveling in a tube, R. J. Emrich and F. B. Harrison—1255(A)
Solid state (see **Crystalline state**)
Sound (see **Acoustics**)
Spark discharge (see **Discharge of electricity,** etc.)
Spectra, absorption (see also **Absorption of radiation**)
Absorption spectrum of phenol, substitution of deuterium, W. W. Robertson, F. A. Matsen, and A. J. Seriff—652(A)
Of active nitrogen, R. Edwin Worley—531(A)
Of COSe, M. W. P. Strandberg and T.Wentink—1249(A)
Lorentz-Lorenz correction in ultraviolet absorption, Lois E. Jacobs and J. R. Platt—1234(A)
R-f absorption lines in solids, J. H. Van Vleck—1229(A)
Solar wave-lengths in extreme ultraviolet, K. C. Clark—1250(A)
Water of crystallization and absorption bands of neodymium bromate crystals, Arnold Benton and E. L. Kinsey—536(A)
Spectra, atomic
Displacement of energy levels, H. A. Bethe—1271(A); F. J. Dyson—617, 1272(A); Julian Schwinger and Victor Weisskopf—1272(A); T. A. Welton—1271(A)
Fine structure of He II λ4686, J. E. Mack and N. Austern—1233(A)
He line λ1640, G. R. Fowles—639(L)
Of Np^{237}, fine structure, F. S. Tompkins—1214(L)
Of N, isotope shifts in, John R. Holmes—539(A)
Of K, violet asymmetry, Shang-yi Ch'en—1470(L)
Rydberg-Ritz formula in quantum mechanics, Robert Jastrow—60
Structure of Hg band λ2540, S. Mrozowski—1233(A)
Spectra, general
Observing beat frequencies, Arthur Ruark—181(L)
Of the sun; V-2 rockets, John J. Hopfield and Harold E. Clearman, Jr.—876
Spectra, microwave
Absorption spectrum of COSe, M. W. P. Strandberg and T. Wentink—1249(A)
Of ammonia, Robert Karplus—1120(L)
Of chromic alum, P. R. Weiss—470
Collision and saturation broadening, Hartland S. Snyder and Paul I. Richards—1178
Collision broadening absorption, saturation effects, Robert Karplus and Julian Schwinger—1020
Ferromagnetic resonance absorption, Charles Kittel—155
Frequency modulation, Robert Karplus—1027
Inversion spectrum of NH_3, James W. Simmons and Walter Gordy—713
Magnetic field of a rotating molecule, G. C. Wick—51
Of microwave resonance lines, Paul I. Richards and Hartland S. Snyder—269(L)
Minimum detectable absorption, W. D. Hershberger—1249(A)
Nuclear quadrupole effects in molecules, J. Bardeen and C. H. Townes—97
Quadrupole interaction in ICl, Richard T. Weidner—254(L)
Rotational spectrum of ICl, C. H. Townes, B. D. Wright, and F. R. Merritt—1249(A)
Saturation effect of ammonia, Robert L. Carter and William V. Smith—1053
Stark effect in COSe molecule, T. Wentink, Jr., M. W. P. Strandberg, and R. Hilger—1249(A)
Stark splitting, absorption in paramagnetic salts, C. Kittel and J. M. Luttinger—162
Width of lines in cupric salts, theory, J. H. Van Vleck—1249(A)
Spectra, molecular (see also **Molecular structure and constants**)
Anomalies in phosphine and arsine, Virginia M. McConaghie and Harald H. Nielsen—1250(A)
Of heavy water vapor, infra-red, Fred P. Dickey and Harald H. Nielsen—1164
Magnetic field of a rotating molecule, G. C. Wick—51
Of CH_4, in Fraunhofer spectrum, Robert R. McMath, Orren C. Mohler, and Leo Goldberg—1203(L)
Nuclear quadrupole moments in asymmetric rotor molecules, J. K. Bragg—1250(A)
Of $OC^{14}S$, rotational, spin of C^{14}, Arthur Roberts—1405(L)
Quadrupole interactions on nuclear radiofrequency spectra, Norman F. Ramsey—1243(A)
Rotational spectrum of ICl, C. H. Townes, F. R. Merritt, and B. D. Wright—1334, 1249(A)
Stark spectrum of HDO, M. W. P. Strandberg, T. Wentink, Jr., R. E. Hillger, Gregory H. Wannier, and Murray L. Deutsch—188(L)

Spectra, molecular (continued)
Stark spectrum of H_2O, S. Golden, T. Wentink, R. Hilger, and M. W. P. Strandberg—92(L)
Ultraviolet band system of O_2^+, Lalji Lal—255(L)
Ultraviolet spectra of benzene and borazole, molecular orbital treatment, C. C. J. Roothaan and R. S. Mulliken—1234(A)
Spectroscopy, technique
Photo-tubes in ultraviolet fluorescence, Robert D. Cowan—1234(A)
Production of pure Hg^{198}, Paul Bradt and Fred L. Mohler—925(L)
Stark effect
In COSe molecule, T. Wentink, Jr., M. W. P. Strandberg, and R. Hillger—1249(A)
In diatomic molecules, W. A. Nierenberg, I. I. Rabi, and M. Slotnick—1430
In high frequency fields, F. R. Merritt and C. H. Townes—1249(A)
Stark modulation method, W. D. Hershberger—1249(A)
Stark spectrum of HDO, M. W. P. Strandberg, T. Wentink, Jr., R. E. Hillger, Gregory H. Wannier, and Murray L. Deutsch—188(L)
Superconductivity (see **Electrical conductivity and resistance**)
Surface phenomena
Emissivity of beryllium oxide, Ralph L. Seifert—1181

Thermal diffusion
Of nitrogen, Alfred K. Mann—412(L)
Separation of Ne isotopes, F. K. Elder, Jr.—1263(A)
Thermal expansion
X-ray determination of coefficients of crystals, M. Y. Colby and L. F. Connell, Jr.—653(A)
Thermionic emission; Emitting surfaces
Of chromium, H. B. Wahlin—1458
Decay of Ba–Sr oxide cathodes, W. E. Danforth and W. E. Ramsey—1244(A)
Emittance of materials used as anodes, A. D. Power—1246(A)
Of oxide-coated filaments, Harold Jacobs, George Hees, and Walter Crossley—1244(A)
Mechanism of emission at arc cathode, Jerome Rothstein—1214(L)
Thermionic emission of oxide-coated cathodes in gaseous conduction devices, W. F. Hodge—95(A)
Workfunctions of a gas-coated surface, G. L. Weissler and R. W. Kotter—538(A)
Thermodynamics
Of irreversible processes, elasticity and anelasticity, Carl Eckart—373
Second law, equation of state, J. L. Finck—655(A)
Of strained elastomer, L. E. Copeland and M. Mooney—1224(A); M. Mooney—1224(A)
Work, heat, and temperature concepts, J. L. Finck—1267(A)
Thermoelectric effects
Onsager's reciprocal relations, Herbert B. Callen—1349
Thermomagnetic effects
Onsager's reciprocal relations, Herbert B. Callen—1349
Semiconductors at high temperature, V. A. Johnson and K. Lark-Horovitz—1257(A)
In tellurium, Wayne Scanlon and K. Lark-Horovitz—1256(A)
Thermomagnetic and galvanomagnetic coefficients, H. B. Callen—1248(A)

Ultrasonics, (see also **Acoustics**)
In Sn, observation of twinning, W. P. Mason, H. J. McSkimin, and W. Shockley—1213(L)

van der Waals forces
Influence of retardation on the London-van der Waals forces, H. B. G. Casimir and D. Polder—360
Viscosity
Bulk viscosity of liquids, L. N. Liebermann—537(A)
Of glass, Howard A. Robinson and Edward M. Man, Jr. 1222(A)
Of nucleic acid, Jesse P. Greenstein—1225(A)

Wave guide (see **Electromagnetic theory** and **Electrical circuits**)
Wave motion
Refraction of waves from point source, E. Gerjuoy—1442
Waves of finite amplitude, Antonio Romero Juarez, 654(A)
Work function (see **Thermionic emission; Photoelectric effect**)

X-rays, absorption, diffraction, scattering, reflection, refraction, and polarization
Achromatization of Debye-Scherrer lines, H. Ekstein and S. Siegel—1207(L)
Diffraction camera, high temperature, James W. Edwards, Rudolph Speiser, and Herrick L. Johnston—1251(A)
Diffraction from coarse powders, Zigmond W. Wilchinsky—1251(A)
Fourier equations for x-ray studies, Dan McLachlan, Jr.—539(A)
Small-angle scattering, apparatus geometry, Harry H. Hubbell, Jr.—1251(A)
Small-angle scattering, intensity distribution, John Turkevich and Harry H. Hubbell, Jr.—1250(A)
X-rays, emission (see also **X-rays, spectra** and **spectroscopy,** etc.)
Of element 43, L. E. Burkhart, W. F. Peed, and B. G. Saunders—347
X-ray yield, $\gamma-n$ reactions, G. C. Baldwin and G. S. Klaiber—1156
X-rays, spectra and spectroscopy, wave-length measurements (see also **X-rays, emission**)
Wave-length and energies of γ-rays from Au^{198}, Jesse W. M. DuMond, David A. Lind, and Bernard B. Watson—1392(L)
X-rays, tubes, apparatus
Microphotometer for x-ray diffraction diagrams, R. Pepinsky and H. I. West, Jr.—1235(A)
X-ray optical images, Paul Kirkpatrick and A. V. Baez—1234(A)

Zeeman effect
Microwave Zeeman spectra, C. K. Jen—1248(A)
